The Torch Aire-Mega™ is a portable UV-C disinfection device for room air to help eliminate any airborne virus, bacteria, and spores. When in operation, air is drawn into the fixture through the four louvered filter panels, the air then passes into the exposure chamber where it flows over twelve UV-C bulbs and is disinfected. The air then leaves through the louvered exhaust panel that is located on the top. This design prevents UV-C exposure by restricting light from passing into the occupied area making it safe for people to be in the room at all times. This is a tremendously high capacity unit with the ability to treat up to 120,000 cubic feet per hour.

Germicidal Ultraviolet Lamps
Lamps are instant starting and provide the utmost in quality, sustained output, and longevity.

Ballasts
State-of-the-art electronic ballasts specifically developed for the operation of ultraviolet lamps. Versatile ballasts provide high lamp output; are lightweight, efficient, and operate cool for longer life.

Lampholders
Set includes a stationary and a spring-loaded, telescopic holder that holds a single pin lamp securely. The spring-loaded feature on one end facilitates convenient, quick and easy lamp changes.

Interlock Safety Switch
The interlock safety switch is a standard feature that disconnects power to the model when the access panel is unhinged for lamp or filter replacement (located under the cover).

Polished Reflector
Interior surface is polished providing a highly reflective surface to maximize ultraviolet intensity within the chamber.

Louvered Exhaust Panel
Protects the room’s occupants from ultraviolet exposure by restricting ultraviolet radiation from passing into the room.

Lamp Operation Indicators
(LEDs) Provide positive indication of each germicidal lamp’s operation.

Stainless Steel Enclosure
Manufactured in Type 304 stainless steel for unparalleled strength, durability, and an attractive finish.

Promate™ Disposable Filters
Cost effective, disposable filters for frequent filter changes.

Differential Air Pressure Gauge
Used to measure filter resistance by measuring the pressure differential between outside (the fixture) air and the pressure in the blower compartment helping to indicate when filter replacement is required.

3-Position Power Switch
Power to the fixture is controlled by a three position key switch. In the “BLOWER ONLY” position, power is supplied to just the blower and no power is supplied to the germicidal lamps. In the “LAMPS & BLOWER” position, power is supplied to both the blower and the germicidal lamps.

Torch Aire-Recessed™

The Torch Aire-Recessed™ is an ultraviolet light room air disinfection unit designed to help eliminate airborne microbes, particularly in crowded or poorly ventilated areas and situations where the risk of cross contamination is high. It is easily mounted in a ceiling and fits especially well within a drop ceiling format. The Torch Aire-Recessed pulls air inward and passes over the enclosed UV-C bulbs, continuously disinfecting the air. This design prevents UV-C exposure to those in the room by restricting light from passing into the occupied area, making it safe for people to be present.

Other UV Disinfection Solutions available from ClorDiSys

**LANTERN:** A lightweight and portable room disinfection device that can sit or hang inverted during disinfection cycles. It is able to eliminate 99% of bacteria and viruses within one minute in an 8’ x 8’ space. Larger areas can be treated by repositioning the Lantern for multiple treatments.

**FLASHBAR:** Permanently mounted UV-C light fixtures that are able to eliminate pathogens in minutes with just the flip of a switch.

**TORCH:** An easily transportable, powerful disinfection system that is able to eliminate 99% of bacteria and viruses within one minute in a 20’ x 20’ space, everywhere the light shines. Reposition if necessary and perform additional exposures to treat larger spaces.

High-level disinfection without the high-level price tag
